

**SYSTEM AND METHOD FOR RECONNECTING A MOBILE
STATION TO AN EMERGENCY OPERATOR**

Abstract of the Disclosure

1 A technique for automatically reconnecting a mobile unit to an
2 emergency operator when the connection therebetween is interrupted is
3 described. In a preferred embodiment, when such a call is dropped, a
4 mobile switching center ("MSC") through which the call is connected detects
5 that the call has been dropped and, after determining that the call is an
6 emergency call, based on the number originally dialed by the mobile unit,
7 automatically reestablishes the connection with the mobile unit, thereby
8 reestablishing the emergency call.
